

Solve the equation $2x + 3 = 7$. Share your solution with your partner and discuss the steps you took.

Solve for y in the equation $3y - 5 = 10$. Compare your solution with your partner's and discuss any differences.

Find the value of x in the equation $x/4 + 2 = 6$. Share your reasoning with your partner.

Solve $5x - 3 = 2x + 9$. Discuss with your partner how you isolated the variable.

Determine the value of y in the equation $4y + 7 = 3y - 2$. Compare your approach with your partner's.

Solve the equation $6 - 2x = 4x + 8$. Explain to your partner the steps you took to find the solution.

Find x in the equation $7x + 1 = 3x + 13$. Discuss with your partner how you solved it.

Solve for y : $8y - 5 = 2y + 13$. Share your solution and reasoning with your partner.

Determine the value of x in the equation $x/2 - 3 = 5$. Compare your solution with your partner's and discuss any differences.

Solve the equation $9 - 3x = 2x + 4$. Share your approach and solution with your partner.
